

Fall Prevention... How?

Living Well Proudly Presents Dr. John Fullerton, MD and Hampton Health, Ltd

Falls don't "just happen," and people don't fall because they get older. Often, more than one underlying cause or risk factor is involved in a fall. As the number of risk factors rises, so does the risk of falling. Many falls are linked to a person's physical condition or a medical problem, such as a chronic disease. Let Dr. Fullerton explain how a fall could be a sign of a new medical problem that needs attention, such as an infection or a cardiovascular disorder. It could also suggest that a treatment or interventions for a chronic ailment, such as Parkinson's disease, Alzheimer's disease or dementia, needs to be changed.

Speakers

John H. Fullerton, MD and Minoo Parsa, BS

Dr. Fullerton is Board Certified in Internal Medicine, Geriatrics, Hospice, Palliative Medicine, and Addiction Medicine, as well as board certified Medical Review Officer, Medical Director, Forensic Physician, and Home Care Physician.
